Public transport and parking

Parking at St Luke's is extremely limited and restricted to University of Exeter permit holders. Where possible, please consider alternative travel options when planning your visit. <http://www.exeter.ac.uk/visit/directions/stlukes/>

Cochrane – the challenges and opportunities

For over 25 years Cochrane has produced high-quality systematic reviews and played a key role in the world of evidence-based medicine. It has fiercely guarded its independence and sought to promote a wider and better understanding of the healthcare research. What challenges and opportunities lie ahead, in an era full of 'fake news'? And one in which there is an increasing belief that the world's great problems – in health care and beyond - will never be solved by academia alone.

Professor Martin Burton is Director of Cochrane UK, the centre responsible for supporting Cochrane activities in the UK & Ireland. He is Professor of Otolaryngology, University of Oxford, Honorary Consultant Otolaryngologist, Oxford University Hospitals NHS Foundation Trust and Fellow in Clinical Medicine at Balliol College. He is joint co-ordinating editor of the Cochrane ENT Group.

This activity is a Researcher-Led Initiative that has been funded by the University of Exeter Research Development and Research Culture team
